While at Península Valdés, the mothers fast, but produce enormous amounts of milk originated from their body reserves to meet the demands of their rapidly growing calves. Calves nurse and develop skills necessary for their first migration.

Every winter and spring, one of the largest remaining populations of southern right whales congregates near Península Valdés, Patagonia, Argentina. Pregnant mothers arrive in late winter after spending many months feeding offshore. While at Península Valdés, the mothers fast, but produce enormous amounts of milk originated from their body reserves to meet the demands of their rapidly growing calves. Calves nurse and develop skills necessary for their first migration.
